

## HYPER-PRO FORK SPRINGS

The OE front forks of the FJR1300 are fine for normal road use but those who tour heavily laden or ride fast soon find they are soft and dive under braking. These replacement performance progressive front fork springs are the solution.

The company offer quality progressively wound fitment and they have done their homework on set-up and list recommended preload/compression /rebound settings that in my opinion are spot on. I am running a set of these springs at the moment and

have found the bike is less vague on certain corners than it used to be with the o/e set-up and the fork action is certainly more firmer and controlled. Dive when braking is also reduced.

Obviously Hyperpro recommend you fit these with their rear spring conversion/rear shock absorbers but if you are happy with the standard front forks it is not a necessity to change them. If you wish to have these fitted the cost is £179.00 in total including set-up. If you are confident you can strip the forks yourself we can supply the fork kit for £110.00 plus postage.

The kit contains springs, oil and detailed instructions for fitting plus suggested set-up adjustments, but a Yamaha workshop manual is recommended as Hyperpros' instructions are not specific to the FJR.

**Hyp-fork** Hyper-pro Fork springs **£110**

Also Available **NEW Hagon Progressive Fork Spring Kit** only **£79.00** including oil **HAG-FS**

## HYPER-PRO 3D SHOCK ABSORBER

This is the Hyper-pro 3D shock. It has numerous tweaks added over its predecessor such as a black nitride coated damping rod and a new black titanium coating to the damper body and remote high speed/low speed compression damping unit. The remote damping unit mounts in the same place as the old model i.e the highly visible area just behind the rear brake pedal and looks super trick. The mounting bracket is now a gold anodised aluminium affair and again improves over the old style mounting bracket. Hyperpros attention to detail is second to none. Quality and finish is now, in my opinion, far and above the likes of Ohlins and ride quality is firm and plush. *Fits all models of FJR1300.*

*Produced in-house on precision CNC machinery,Hyperpro's range of shocks offer fully adjustable pre-load adjustment and high / low speed compression and rebound damping. They have all the advantages of low stiction carbon nitride coated 16mm rod, CNC machined 7075 aircraft alloy body, optional integrated hydraulic spring preload adjuster and shock length adjustment, for easy ride height changes. All shocks come fitted with purple progressive springs and a complete user friendly set up manual.*

**Hyp-shock 3D** Hyper-pro 3D rear shock **£599**
